

SMB QuickFix

The Repair and
Maintenance Service for
Weeke Drilling Drives

SMB

SMB is manufacturer of fixed and individually controllable drilling drives. Our drives are in operation at many furniture producers and convince with high performance and reliability.

QuickFix

Maintenance and Repair of **Weeke** Drilling Drives

Apart from manufacturing our own drilling drives, we are also specialised in maintaining and repairing products of other well-known manufacturers.

Weeke machines are excellent for your production. However, even top-quality products naturally wear out in time. With our QuickFix Service your machines get back into operation reliably.

We guarantee a high service and repair friendliness in case of machine malfunctions. Repairs or maintenance are usually done within shortest time. The goods can be repaired at your premises or in our factory at a 24-hour-service, if it is very urgent.

We look forward to supplying you with spare parts for Weeke drives, e.g. drilling spindles or drive spindles.

"My colleagues and I help you to minimize down times. You as our customer are the main focus of our business. We support you personally and with great commitment. We're there, when you need us."
